Priority	Low

Description

The tooltip in the file upload component is sometimes displayed outside the hover area and does not hide correctly when the cursor moves away.

This issue occurs in different states:
No file selected: the tooltip «No file selected» remains visible after selecting a file and moving the cursor away from the Select a file button.

After clearing a selected file: the tooltip showing the name of the previously selected (now removed) file remains visible after moving the cursor away from the Select a file button.

Steps to reproduce

Scenario 1 - «No file selected»:
> click on «Select a file»
> Select a file
> move the cursor away from the button

Scenario 2 - after clearing a selected file:
> click on «Select a file»
> select a file
> remove the selected file (click «Cancel» in the file picker)
> move the cursor away from the button

Expected result

The tooltip appears only when hovering over the file upload button or file name and disappears immediately when the cursor leaves the hover area.

Scenario 1: the tooltip with a file name is displayed when the cursor hovers the «Select a file» button or a file name, and disappears immediately when the cursor leaves the hover area.
Scenario 2: the tooltip «No file selected» is displayed when the cursor hovers the «Select a file» button.

Actual result

Scenario 1: the tooltip «No file selected» remains visible at the hover area and outside the hover area
Scenario 2: the tooltip with the name of the deleted file remains visible at the hover area and outside the hover area
