Operating System	macOS 26.2
Browser	Chrome 144.0.7559.133; FireFox 147.0.1; Safari 26.2
Severity	Minor
Priority	Medium

Description

On the initial scroll after page load, the sticky header jumps before becoming fixed at the top of the page.

A JS error related to the top property is present in the console:

Uncaught TypeError: Cannot read properties of undefined (reading 'top')

```
▶ jQuery.Deferred exception: Cannot read properties of undefined (reading 'top') TypeError: Cannot read properties of undefined (reading 'top')
    at HTMLDocument.<anonymous> (https://www.goodfoodshow.com/wp-content/themes/goodfoodshow/js/main.js?ver=1770816306:906:49)

    at jquery.min.js?ver=3.7.1:2:27330
```

Notes: on mobile devices, header is not sticky; issue does not occur.

Steps to reproduce

1. Open the page on Desktop or Tablet (mobile header is not sticky).
2. Start scrolling down for the first time.
3. Observe that the header jumps before becoming fixed.

Expected result

Sticky header becomes fixed smoothly at the top of the page on initial scroll without visual jumps.

Actual result

On initial scroll, the page scrolls partially, then the header jumps and only after that becomes fixed. Subsequent scrolling works correctly.
